Other Brands / Services

If you can't find a brand or service listed, please refer to our shoe, bag and leather repair services pages, or get in touch with our team for a custom quote.

- 1** Full colour matched Vibram rubber heel or $\frac{3}{4}$ rubber and $\frac{1}{4}$ leather. We advise following the original shoe design, or choosing a full rubber heel if you would like to protect the entire heel from wear.
- 2** For building up and restoring the worn toe portions of leather soles. Required if the soles have been significantly worn down prior to applying protective rubber soles.
- 3** Metal toe plates sit flush with the existing leather soles. We stock UK imported Lulu or Triumph toe plates.
- 4** Our protective soles come in a wide variety of styles, colours and thicknesses. Our Vibram soles are designed to protect the original soles, provide slip-resistance, and reduce water absorption. Protective soles can be replaced throughout the life of a pair of shoes.
- 5** Our leather soles are custom crafted with German imported JR leather. The soles can be stained to match the original colour of your soles or to a colour of your choice.
- 6** Vibram rubber heel tips, or branded heel tips. If heel tips are supplied the cost of repair is the same.
- 7** For scuffed, torn, or discoloured heel pieces. Depending on the extent of damage, scuffed/torn heel pieces either be smoothed & touched up, or they can be recovered in colour matched leather. In instances where we cannot find a match for patent, patterned or metallic leather, the coverings will be replaced with colour matched smooth leather. We always replace the pair.
- 8** Broken or damaged heels that are beyond repair can be replaced, and covered in colour matched leather. For our heel replacement service we always replace the pair of heels.
- 9** Vibram sole units. We have a selection of designs and will find the most appropriate match for your shoes. If the original soles are not Vibram rubber, or were a different style of Vibram, changing to Vibram soles may change the look, feel and weight of your boots.
- 10** Required if the heel has worn significantly but the rest of the sole is in good condition. Crafted with Vibram rubber.
- 11** Full rubber soles, or full sole unit replacement with Vibram rubber. We stock a variety of colours and designs but cannot match the original branded sneaker soles.
- 12** Rubber soles can be touched up with colour-matched dye but with no guarantee of how long the restoration will last. Results vary with materials.
- 13** We cannot guarantee the extent to which we can remove grass stains, dirt, spillages, general stains out of fabrics or other non-leather materials such as satin and mesh.
- 14** Wedding shoes can be covered with fabric, leather or satin of choice. We must physically inspect and approve the chosen material prior to guaranteeing the job.
- 15** Hand crafted holes. We are able to replicate various shapes such as circles, ovals, circular or holes with a slit design. Please note manufacturers typically add holes with a machine so we cannot guarantee the new holes will be identical to the original.
- 16** An in-store fitting is required for this service.
- 17** Required when a backlining either leather or material has thinned, or a tear has formed. We only craft backlinings in colour matched genuine smooth leather.
- 18** Required when the internal lining of the shoe has deteriorated, or tears have formed. We only craft backlinings in colour matched genuine smooth leather.
- 19** We do not stock branded hardware replacements. Our replacements are matched as closely as possible for size, shape and colour. We cannot provide guarantees of hardware repair until we have assessed the damage in person.
- 20** If any shoe detailing such as beads, gemstones, diamantes need to be replaced, new pieces can either be sourced by the customer or our staff. We cannot guarantee or provide an exact quote for the service until appropriate replacement pieces have been sourced.
- 21** A traditional polish with Saphir Medaille D'or beeswax creams or, if requested, a high shine finish with mirror gloss.
- 22** Our restorative cleaning service hydrates and nourishes the leather. Waterproofing preserves and protects the leather following restoration. Areas with discolouration / stains or colour transfer can also be touched up with colour-matched dye. Refer to **27** for restorative services available for smooth leathers, suedes, patent and fabrics.
- 23** We specialise in cleaning and restoring special leathers and materials and leathers such as exotic / reptile, metallic finished and patina leathers. Refer to **27** for restorative services available.
- 24** A complete restorative service to restore the colour and appearance of the leather to as-new condition. The original colour of the item can be colour matched and finish reapplied. Following the restoration the leather is nourished and waterproofed for protection. Refer to **27** for restorative services available for different leathers and materials.
- 25** Recoloured leather soles will only last as long as the original. The soles will naturally discolour and scratch with wear. Worn shoes will be smoothed as much as possible, however residual dents may be present following the restoration.
- 26** Colour changes must be to a darker colour than original. You may choose a colour from our leather selection, or provide a physical sample of the desired colour. This physical sample must be brought or sent into our store. Examples include, a piece of fabric, tie, a button, a small object. We cannot colour match based on photos sent to us online. Refer to **27** for restorative services available for different leathers and materials.

- 27** Refer below for types of restorative services available for different leathers and materials.
- Smooth Leathers** can be cleaned, restored and recoloured / redyed to any colour.
- Suedes** can be cleaned and restored. Recolouring or redyeing suedes is limited to basic colours such as brown, navy and blacks.
- Patent** leathers are coated with a plastic film that limits our restorative services to stains that have not penetrated the pores of the leather. We therefore only offer minor touch ups (to conceal damage) for patent leather. We do not provide services to recolour, resolve colour transfer or discolouration over time.
- Fabrics** can be cleaned and restored. Recolouring is sometimes possible. We cannot provide a guarantee for complete removal of stains from fabrics or materials.
- Metallic** restorations may appear flatter and less vibrant than the original colour. Metallic touch ups are aimed towards concealing damage, rather than restoring the leather to original condition.
- Exotic / Reptile** can be cleaned, touched up and recoloured.
- Patina** can be burnished and recoloured with colour matched dye to restore the original patina.
- 28** For holes or tears. An internal or external patch of leather is used to reinforce and close the site of damage. External patches must be recoloured.
- 29** Piping is found on the corners or edges of a bag or accessory. We can patch repair corner piping or replace it entirely. Repaired piping will be slightly thicker in the repaired area. Replaced piping will be a consistent size.
- 30** Linings can be replaced with leather or fabric. We have a selection of materials to choose from. Relining of pockets, attachment of hardware (the existing branded or non-branded) and zip tags is also possible for additional cost.
- 31** We can modify the structure of bags or accessories. Reshaping can involve correcting 'saggy' bags. Cost provided is per side. We advise reinforcing two sides for best results.
- 32** Worn or broken straps can either be shortened and re-joined or a new strap can be custom-made. Our straps are crafted with colour-matched leather with detailing including colour matched stitching and waxing of leather edges. If there are two main straps we always replace the pair.
- 33** Adding straps to an item that were not there originally. Only guaranteed upon inspection - this is a large modification to the bag which must be approved by one of our leather consultants.
- 34** Worn or damaged handles can either be repaired / reinforced or custom made. Replaced handles are crafted with colour matched leather with detailing including colour matched stitching and waxing of leather edges. We always replace both handles.
- 35** The loop is the part of the bag that attaches to straps or handles. We typically advise loop replacement rather than repair. Our loops are crafted with colour matched leather with detailing including colour matched stitching and waxing of leather edges.
- 36** Leather edges are restored with colour matched beeswax. The wax is essential to hold leather together, and prevent fraying. If multiple edges require re-waxing the cost is calculated as total, rather than per edge.
- 37** We shorten or lengthen bag straps to achieve a custom length. This usually requires a fitting to determine the ideal length of the strap. Alternatively you can supply a sample strap of the desired length.
- 38** Zip replacements are matched as closely as possible for size, shape and colour. The original zip puller / tag can usually be put onto the new zip. If not possible, puller / tag can be replaced with a generic non-branded piece. We can also add zips to items that did not have zips originally.
- 39** Professional waterproofing to protect leather items from marks, stains and colour transfer.
- 40** We do not offer a spot cleaning service for linings. Both the exterior and interior of the bag needs to be cleaned. We cannot guarantee the extent to which markings / stains / colour will be removed from fabric linings. The results vary from job to job - depending on the how long the stain has been there, type and quality of leather or material and if any prior cleaning attempts were made.
- 41** Hardware can be polished to clean and brighten hardware, but this will not resolve scratches. Touch ups are suitable for matte hardware and some shiny hardware. Replating (re-dipped in gold, or silver) is only available for certain hardware. Our leather specialists can advise on which service is appropriate upon inspection. An alternative would be replacing the hardware. Refer to **19**.
- 42** An internal leather patch is used to close and reinforce the torn area. Following the repair, a faint join line may be visible. The cost of the patch depends on the size and location of the tear.
- 43** The condition of the vintage leather will indicate which services are available for your item. One of our leather specialists can advise upon inspection.
- 44** Suitable for Chanel smooth leathers (lamb skin/calf skin/goat skin) with widespread discolouration/stain/scratches. Colour matched leather dye will be applied to the leather to achieve a blended and natural finish.
- 45** The worn leather is removed from the chain and replaced with genuine, colour matched leather. The new leather is then re-woven through the chain links.

- 46** Chain replacements are matched for size, shape, colour and weight to the original Chanel chain. Replating of chain (dipping in gold, or silver) is only possible for small portions of discolouration/ chipping. Our leather specialists can advise whether replating is viable for your chain.
- 47** For local discolouration, stain, scratches on smooth leather linings. If a colour touch up is not possible, lining replacement is also an option. Refer to **48** for lining replacements.
- 48** For significantly scuffed, torn or perished internal linings. The new lining is crafted from genuine, colour matched leather. The new internal lining can either 1) maintain the internal Chanel branding or 2) omit the internal Chanel branding.
- 49** Options for worn Louboutin soles include 1) "TOPY" / Applying classic red, half rubber Vibram sole protectors. 2) Resoling with half leather soles and dyeing red. 3) Redyeing soles red - note: the colour will only last as long as the original. The soles will discolour and scratch with wear. Worn soles will be smoothed as much as possible, however residual dents may be present following the restoration.
- 50** Recraft LV trimming with colour matched leather and signature stitching.
- 51** LV straps are replicated using colour matched genuine leather, colour matched stitching, waxing and hardware. We can often reuse and reattach the original LV hardware. Any replacement hardware provided by Evans will not be LV branded.
- 52** Repairing cracks in PVC depends on the location and extent of the cracking. A quote can only be provided on item inspection.
- 53** A leather or fabric patch is placed internally to close the tear in the PVC.
- 54** Suitable for scuffs, discolouration and superficial holes in PVC. This restorative service is aimed at concealing damage.
- 55** Our most popular restorative service for LV owners who wish to restore their bag to a new state (consistent coloured Vachetta). Includes a restorative cleaning service to hydrate, condition and waterproof Vachetta leather. The discoloured, watermarked, stained, scuffed Vachetta is then touched up with colour matched dye. Suitable for darkened leather, watermarks, stains. If leather is too oily, replacement is advised.
- 56** Epi leather does not absorb dye as readily as softer leathers, and the ridges in the leather make application harder. We can generally achieve up to 80% improvement. This restorative service is aimed at concealing damage rather restoring the item to original condition.
- 57** Nylon / Tessuto is thoroughly cleaned. We cannot guarantee the extent to which the colour will be restore following the clean, nor the extent to which stains and marks will come out. Results vary.
- 58** Worn rubber soles are replaced with full Vibram rubber.
- If a synthetic sole has split or cracked through the middle, the only option is replacement soles. Sample sole replacements are provided upon request.
- 59** For minor tears in Gucci monogram fabric that can be hand stitched.
- 60** Colour match with metallic Gucci sneaker heels is not exact. This service will conceal the damage (scuffs) to metallic heels, but not restore them back to original condition.
- 61** Recovering heelpieces in genuine, colour matched leather. The cost of this service is higher than standard heelpiece recovering jobs due to the style of heel.
- 62** Our protective and full rubber soles are handcrafted to follow the signature TABI sole design.
- 63** We stock replacement Valentino rock studs. Cost is the same whether the rockstud is supplied by Evans or the customer.
